

1. Start registration as described in the following only as soon as you have received the Letter of Registration.

If you have reset your previous procedure to pushTAN, your Online Banking PIN will continue to apply. Otherwise you will receive a PIN Letter by separate mail, containing a new Start PIN.

2. Install the S-pushTAN app from the Play Store on your mobile terminal.

Start the app and assign a password. Such password must consist of at least eight characters (numbers, letters and one special character).

Confirm the question whether the S-pushTAN app shall be permitted to send you push messages.

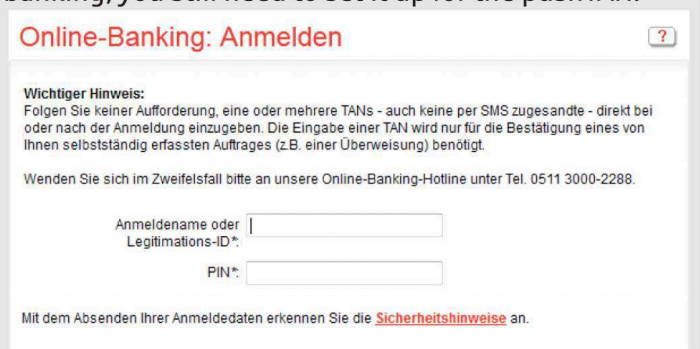

3. Scan the QR code shown in the Registration Letter with the help of the S-pushTAN app.

4. Your personal activation code will be displayed on the S-pushTAN app.

5. Now log your PC onto the Online Banking of your Savings Bank. For that purpose, use the login name or legitimation ID from the Registration Letter and, in the event of new contracts, the Start PIN you have received by mail. Important: If you use an app or banking software for online banking, you still need to set it up for the pushTAN.

6. Enter your personal activation code from the S-pushTAN app.

7. The S-pushTAN app will display the information that activation has been accomplished. If you have received a new PIN by mail, you still need to change it in online banking.

For that purpose, the TAN required for the change will be sent to the S-pushTAN app.
